

Recently hike in H-1B visa fees from US can reduce the job opportunities of Indians. Many small scaled workers can be jobless.

## Implications

Brain - Drain:- It will reduce the capability of youngsters.

Introduction

The introduction is very basic and lacks context. It only says that the U.S. visa fee hike reduces job opportunities. It should also highlight India's dependence on the U.S. job market, especially in the IT sector, and why this is a concern.

Unemployment:- Several people will lose their jobs from US.

Body

Strengths: Student has tried to list implications like brain drain, unemployment, agriculture, inflation, and food security.

Weaknesses: Many of these points (e.g., agriculture, food security) are not directly relevant to the H-1B visa issue. The analysis is superficial and misses key areas like IT sector, remittances, forex reserves, and diplomatic impact.

The body needs more depth and stronger linkage to the question.

Agriculture:- Unemployed people will get engaged in agricultural measures

Some good points like infrastructure, skilling, job creation, and trade diversification are included. But explanations are very brief, lacking examples or linkage with policy measures (e.g., "Make in India," "Skill India," global diversification).

Conclusion

The conclusion is present but very weak. Instead of framing the fee hike as an "opportunity" vaguely, it should clearly emphasize self-reliance, domestic job creation, and turning this challenge into a growth driver.

Inflation:- The inflation rate in India will rise.

Food security break:- It can break our food security.

## measures for India

- Infrastructure:- India must create an upgraded infrastructure for employment.
- Skilling and up-skilling:- India must launch skill development course.
- Increase job opportunity
- Increase trade with South Asia and develop income source from there.

Recent hike of H-1B visa fees can be a good opportunity that several talented engineers, doctors, a scientist will do job for India.
